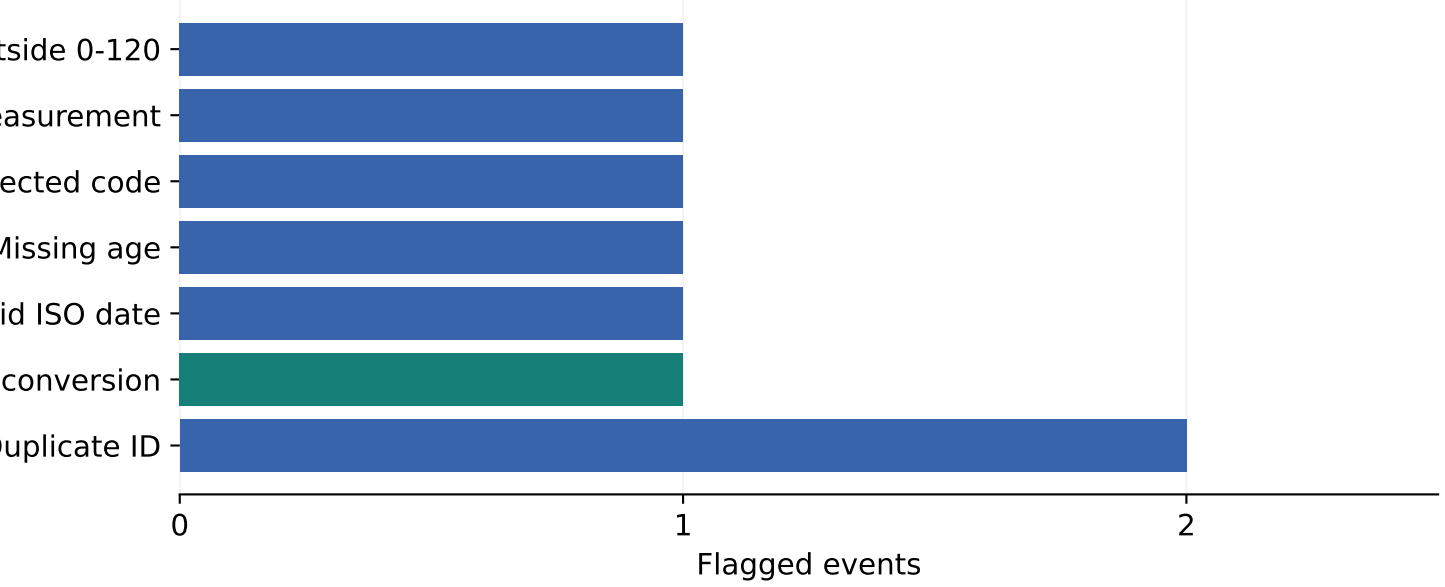
CLINICAL DATA QUALITY AUDIT

A reproducible portfolio example using synthetic imaging records

120 source rows **8 query events** **2 repeated IDs** **1 unit fixed**



DELIVERABLES

01 Source CSV

02 Standardized CSV

03 Row-level query log

04 Reproducible Python

Handling rule

Safe unit conversion is applied and documented. Ambiguous, missing, or impossible values are preserved and sent back as queries; no silent deletion or invented patient values.

ILLUSTRATIVE ONLY | No real patient data. No clinical conclusions or outcomes claimed.

Methods: deterministic seed, explicit validation rules, source-row traceability, assertion checks.
